DETAILED ACTION

Allowable Subject Matter

1. Claims 14-17 and 20-21 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: Nagai et al. (US 5852469) disclose an apparatus and method for reading a data stream which comprises a multitude of raster points as reference points, the raster points specifying a raster, two adjacent raster points defining a segment (*referring to figure 6 shows multiple segments having multiple raster points*), wherein the data stream comprises a plurality of sets of code words, a first set of code words being written in the first direction and a second set of code words being written in a second writing direction (*referring to figure 29, first code string is positioned in a forward direction while second code string is positioned in a backward direction*), the code words of the second set being assigned to segments of the data stream in accordance with a predetermined assignment rule, such that each code word of a set is assigned to a different segment (*referring to figure 29*), wherein the a code word of the second set is distributed over more than one segment in accordance with a predetermined rule, the apparatus further comprising: a first device reading in a first direction of reading which corresponds to the first direction of writing (*element 107 in figure 36 reads data in forward direction*); and a control device: for supplying the code words of the first set to the first reading device, each code word of the first set starting at the first raster point of a segment (*figure 6 shows a first and second code string with each written in opposite directions; each code string includes 2 raster points: starting and ending points; Forward decoder reads the first code string and decodes it in a*

forward direction using forward coding tree as discussed in col. 25, lines 31-43 and also referring to figure 36).

Nagai et al. fail to specifically disclose a **second device** for reading in a second direction of reading which is opposite to the first direction of reading; and for supplying the code words of the second set to the second reading device, wherein one jumps to the second raster point of a segment in accordance with the predetermined assignment rule, and wherein the control device is adapted for jumping at least to a further segment different from the segment, in which the part of the code word of the second set has been found, in accordance with the predetermined rule, when all segments have been searched for code words of the second set in accordance with the predetermined assignment rule and at only a part of the code word of the second set has been found in a segment and the code word of the second set is still not complete, and wherein the control device is adapted for obtaining the at least one code word of the second set completely or a further part of at least one code word of the second set from the further segment. Furthermore, it would have not been obvious to one of ordinary skill in at the time of invention to modify Nagai et al. in order to obtain the claimed invention. Therefore, claims 14-17 and 20-21 are allowed over prior art of record and applicant's argument filed 6/21/2007.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
